

Alarm It

An alarm clock you set from the phone, one line per alarm. It rings with the app closed and the screen dark, builds to a full alert as gently or as suddenly as you choose, and a restart or a computer cable never quietly swallows an alarm.

The time, and the next alarm

Your alarms, in time order

The retro style

16 alarms, one line each

3 ways to build: gentle, linear, jolt

3 ways to stop it

0 accounts, network or tracking

On the watch

The opening page

The time, and under it at the same size the next alarm, how long until it rings, its name and its days. Hold SELECT here for a nap.

Around the edge

The top right maps the pages: a house for the opening page, lit while you are on it, then your alarms, lit when on; the top left the snoozes left; the foot the battery.

When it rings

The watch lights up and builds to a full alert: gently, in even steps, or all at once. Stop it by holding SELECT, by presses in a row, or by the buttons the screen names.

Setting an alarm

- Each alarm is one line in the phone app's Configure form: a time, the days, a name, like 0630 MON-FRI WORK or 21:00 DAILY PILLS.
- Days as a list or a range, or DAILY, WEEKDAYS, WEEKENDS, ONCE or a date; a dash in front keeps an alarm but switches it off.
- A city code like @LON rings at that city's time wherever you are; S5x2 gives one alarm its own snoozes.
- Each alarm keeps its own snooze, and a snooze survives a restart or a computer cable.
- A line it cannot read is shown as you typed it, marked NOT READ, and never rings at a wrong time.

Buttons

DOWN	tap	through your alarms
SELECT	hold	an alarm's options; the nap; in the editor, save
SELECT	tap	in the editor, the next field
UP	hold	invert, the wrist light, the info page
BACK		leave; your alarms stay set

The watch's own Alarm stays on the watch: an alarm set in both rings twice, so use one or the other.

Free, no accounts, no network, nothing collected.
